Document D1 (US-A-5 858 569), which is considered to be the closest prior art, discloses (cf. column 7, lines 23 to 43; figures 2A to 2C, 4, 4A to 4D) an arrangement for generating electrical energy which comprises at least one fuel cell containing a membrane unit arranged in a horizontal position.

The subject matter of claim 1 differs from D1 in that the fuel cell is arranged in a road vehicle for the transportation of goods and/or people.

The subject matter of claim 1 is therefore formally novel (PCT Article 33(2)).

However, the arrangement of a fuel cell in a road vehicle is the universally preferred and known use of a fuel cell, and therefore this distinguishing feature cannot be used to substantiate the inventive step of the claimed subject matter.

Consequently, the subject matter of claim 1 does not involve an inventive step (PCT Article 33(3)).

The arguments advanced by the applicant whereby more uniform conditions for the separation of the reaction gases, the transportation of charge carriers and the

discharge of the reaction products could be achieved by arranging the membrane unit horizontally justify a <u>use</u> claim, at least in the European phase of this application.
